1 Document Summary

The following document provides information of the agency, compliance, and certifications for countries that allow the use and operation of the 4U60 Storage Enclosure.

1.1 Introduction

The 4U60 Storage Enclosure is a 4U, high-density drive enclosure. The enclosure is designed to house up to a full configuration of 60 drives and to maximize the performance of these drives under all operating conditions. For a list of compatible drives consult the HGST 4U60 Hardware User Guide.

The system contains the following high level features:

*Table 1: High Level Features Specifications*

<table>
<thead>
<tr>
<th>Hardware</th>
<th>Details</th>
<th>Number of Component</th>
</tr>
</thead>
<tbody>
<tr>
<td>4U60 Storage Enclosure</td>
<td>4U rack-mounted storage enclosure with slide rail and cable management assembly</td>
<td>1</td>
</tr>
<tr>

2 For More Information

The following chapter identifies the contact information for support on the 4U60 Storage Enclosure.

2.1 Points of Contact

For further assistance with an HGST product, contact HGST Data Center Solutions support. Please be prepared to provide the following information: Serial Number (S/N), product name, model number, and a brief description of the issue.

Email: support@hgst.com
Website: www.hgst.com/4U60
Customer Technical Support and Downloads: support.hgst.com/4U60

For technical user documentation, from the bottom of the Customer Technical Support and Downloads page, select the Resources tab.
3 Disclaimers

The following chapter describes the Regulatory Statement of Compliance, Safety Compliance, and Electromagnetic Compatibility Agency Requirements for the 4U60 Storage Enclosure.

3.1 Regulatory Statement

Product Name: 4U60 Storage Enclosure
Regulatory Model: G460-J-12
Electromagnetic Compatibility Emissions: Class A

This product has been tested and evaluated as Information Technology Equipment (ITE) at accredited third-party laboratories for all safety, emissions and immunity testing required for the countries and regions where the product is marketed and sold. The product has been verified as compliant with the latest applicable standards, regulations and directives for those regions/countries. The suitability of this product for other product categories other than ITE, may require further evaluation.

The product is labeled with a unique regulatory model and regulatory type that is printed on the label and affixed to every unit. The label will provide traceability to the regulatory approvals listed in this document. The document applies to any product that bears the regulatory model and type names including marketing names other than those listed in this document.

3.1.1 Restricted Access Location

The HGST 4U60 Storage Enclosure is intended for installation in a server room or computer room where at least one of the following conditions apply:

- access can only be gained by service persons or by users who have been instructed about the restrictions applied to the location and about any precautions that shall be taken and/or
- access is through the use of a tool or lock and key, or other means of security, and is controlled by the authority responsible for the location.

3.1.2 Safety Compliance

The following table outlines how the 4U60 Storage Enclosure is designed to pass the product safety requirements:

<table>
<thead>
<tr>
<th>Country/Region</th>
<th>Authority or Mark</th>

4 Safety

The following chapter provides safety and regulatory information for the 4U60 Storage Enclosure.

4.1 Optimizing Location

Failure to recognize the importance of optimally locating your product and failure to protect against electrostatic discharge (ESD) when handling your product can result in lowered system performance or system failure.

Do not position the unit in an environment that has extreme high temperatures or extreme low temperatures. Be aware of the proximity of the unit to heaters, radiators, and air conditioners.

Position the unit so that there is adequate space around it for proper cooling and ventilation. Consult the product documentation for spacing information.

Keep the unit away from direct strong magnetic fields, excessive dust, and electronic/electrical equipment that generate electrical noise.

4.2 Safety Warnings and Cautions

To avoid personal injury or property damage, before you begin installing the product, read, observe, and adhere to all of the following safety instructions and information. The following safety symbols may be used throughout the documentation and may be marked on the product and/or the product packaging.

CAUTION Indicates the presence of a hazard that may cause minor personal injury or property damage if the CAUTION is ignored.

WARNING Indicates the presence of a hazard that may result in serious personal injury if the WARNING is ignored.

⚠ Indicates potential hazard if indicated information is ignored.

⚠ Indicates shock hazards that result in serious injury or death if safety instructions are not followed.

⚠ Indicates do not touch fan blades, may result in injury.

⚠ Indicates disconnect all power sources before servicing.

4.3 Electrostatic Discharge

⚠ CAUTION

Electrostatic discharge can harm delicate components inside HGST products.
Electrostatic discharge (ESD) is a discharge of stored static electricity that can damage equipment and impair electrical circuitry. It occurs when electronic components are improperly handled and can result in complete or intermittent failures.

Wear an ESD wrist strap for installation, service and maintenance to prevent damage to components in the product. Ensure the antistatic wrist strap is attached to a chassis ground (any unpainted metal surface). If possible, keep one hand on the frame when you install or remove an ESD-sensitive part.

Before moving ESD-sensitive parts place them in ESD static-protective bags until you are ready to install the part.

### 4.4 Rackmountable Systems

**CAUTION**

Always install rack rails and storage enclosure according to 4U60 Storage Enclosure product documentation. Follow all cautions, warnings, labels, and instructions provided within the rackmount instructions.

Reliable earthing of rack-mounted equipment should be maintained.

If installed in a closed or multi-unit rack assembly, the operating ambient temperature of the rack environment may be greater than room ambient. Therefore, consideration should be given to installing the equipment in an environment compatible with the maximum ambient temperature (Tma) specified by the manufacturer.

Observe the maximum rated ambient temperature, which is specified in the product documentation.

For safe operation of the equipment, installation of the equipment in a rack should be such that the amount of air flow is not impeded so that the safe operation of the equipment is not compromised.

### 4.5 Power Connections

Be aware of the ampere limit on any power supply or extension cables being used. The total ampere rating being pulled on a circuit by all devices combined should not exceed 80% of the maximum limit for the circuit.

**CAUTION**  
The power outlet must be easily accessible close to the unit.

⚠️ Always use properly grounded, unmodified electrical outlets and cables. Ensure all outlets and cables are rated to supply the proper voltage and current.

⚠️ This unit has more than one power supply connection; both power cords must be removed from the power supplies to completely remove power from the unit. There is no switch or other disconnect device.

### 4.6 Power Cords

⚠️ Use only tested and approved power cords to connect to properly grounded power outlets or insulated sockets of the rack’s internal power supply.

If an AC power cord was not provided with your product, purchase one that is approved for use in your country or region.
CAUTION  To avoid electrical shock or fire, check the power cord(s) that will be used with the product as follows:

- The power cord must have an electrical rating that is greater than that of the electrical current rating marked on the product.
- Do not attempt to modify or use the AC power cord(s) if they are not the exact type required to fit into the grounded electrical outlets.
- The power supply cord(s) must be plugged into socket-outlet(s) that is/are provided with a suitable earth ground.
- The power supply cord(s) is/are the main disconnect device to AC power. The socket outlet(s) must be near the equipment and readily accessible for disconnection.

4.7 Safety and Service

⚠️ All maintenance and service actions appropriate to the end-users are described in the product documentation. All other servicing should be referred to a HGST-authorized service technician.

⚠️ ⚠️ To avoid shock hazard, turn off power to the unit by unplugging both power cords before servicing the unit. Use extreme caution around the chassis because potentially harmful voltages are present.

⚠️ When replacing a hot-plug power supply, unplug the power cord to the power supply being replaced before removing it from the 4U60 Storage Enclosure.

⚠️ The power supply in this product contains no user-serviceable parts. Do not open the power supply. Hazardous voltage, current and energy levels are present inside the power supply. Return to manufacturer for servicing.

⚠️ ⚠️ ⚠️ Use caution when accessing part of the product that are labeled as potential shock hazards, hazardous access to moving parts such as fan blades or caution labels.
5 Regulatory Statements

The following chapter provides regulatory statements for the 4U60 Storage Enclosure.

HGST Storage Enclosures are marked to indicate compliance to various country and regional standards.

Note: Potential equipment damage: Operation of this equipment with cables that are not properly shielded and not correctly grounded may cause interference to other electronic equipment and result in violation of Class A legal requirements. Changes or modifications to this equipment that are not expressly approved in advance by HGST will void the warranty. In addition, changes or modifications to this equipment might cause it to create harmful interference.

5.1 FCC Class A Notice

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference.
2. This device must accept any interference received, including interference that may cause undesired operation.

Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy, and if it is not installed and used in accordance with the instruction manual, it may cause harmful interference to radio communications. Any modifications made to this device that are not approved by HGST may void the authority granted to the user by the FCC to operate equipment.

5.2 FCC Verification Statement (USA)

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- This device may not cause harmful interference, and
- this device must accept any interference received, including interference that may cause undesired operation.

Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates and can radiate radio frequency energy, and if not installed and used in accordance with the 4U60 Storage Enclosure User Guide, it may cause harmful interference to radio communications.

5.3 ICES-003 Class A Notice—Avis NMB-003, Classe A

This Class A digital apparatus complies with Canadian ICES-003. Cet appareil numerique de la classe A est conforme à la norme NMB-003 du Canada.
5.4 **CE Notices (European Union), Class A ITE**

Marking by the symbol indicates compliance of this system to the applicable Council Directives of the European Union, including the Electromagnetic Compatibility Directive (2004/108/EC) and the Low Voltage Directive (2006/95/EC). A “Declaration of Conformity” in accordance with the applicable directives has been made and is on file at HGST Europe.

5.5 **Europe (CE Declaration of Conformity)**

This digital apparatus does not exceed the Class A limits for radio noise emissions from digital apparatus set out in the interference-causing equipment standard entitled “Digital Apparatus,” ICES-003 of the Canadian Department of Communications.

Cet appareil numérique respecte les limites bruits radioélectriques applicables aux appareils numériques de Classe A prescrites dans la norme sur le matériel brouilleur: “Appareils Numériques”, NMB-003 édictée par le Ministre Canadian des Communications.

5.6 **Taiwan Warning Label Statement, Class A ITE**

警告使用者：
此為甲類資訊技術設備，於居住環境中使用時，
可能會造成射頻擾動，在此種情況下，使用者會
被要求採取某些適當的對策。

English translation:

This is a Class A product. In a domestic environment, this product may cause radio interference, in which case, the user may be required to take adequate measures.

5.7 **KCC Notice (Republic of Korea Only), Class A ITE**

English translation:

Please note that this device has been approved for business purposes with regard to electromagnetic interference. If you find that this device is not suitable for your use, you may exchange it for a non-business device.
6 Technical Specifications

The following chapter describes the technical specifications related to the 4U60 Storage Enclosure and the location in which it is to be installed.

6.1 Rack Requirements

The rack mount requirements are based on the 4U rack standards. Rack spaces are equipped to give the enclosure ample power and connectivity allowing them to perform as expected. They also provide effective airflow, cooling for the devices, and allow for easy access for routine maintenance.

For proper rack installation of the 4U60 Storage Enclosure, please mount the enclosure according to the following drawing:

Figure 1: Assembly in the Rack

6.2 Alternating Current Input

The following table describes the A/C Input specification for the 4U60 Storage Enclosure.

6.4 Airflow Consideration

The user needs to ensure both the front and rear of the 4U60 Storage Enclosure stay clear of any materials that may block or disrupt the airflow in any way. Disrupting the airflow can cause the enclosure to run the fans at an excessive RPM.

The following rack airflow principles should be considered for best results:

- Controlled air conditioners that are located in the facility where the enclosure will be installed.
- The airflow in and out of the equipment must not be restricted.

6.4.1 Cooling the Enclosure

The 4U60 Storage Enclosure has an advanced thermal algorithm that monitors all of the temperature sensors in the system. The enclosure makes adjustments to the fan speeds based upon the thermal sensors. The fan algorithm takes into account for the temperature sensor warning and critical threshold limits set by SES. If any temperature sensor gets to the warning limit, the fans speeds will increase to cool the component. If the enclosure encounters low temperatures, the system will reduce fan speed in an attempt to conserve power and not over-cool the enclosure.

This algorithm is agnostic to effects of altitude and humidity. The algorithm simply works based on temperatures within the system with emphasis on reducing power consumption.

6.5 Grounding the Enclosure

The enclosure is designed to ground all components to the chassis base with the use of a properly grounded receptacle. Ensure that there is sufficient electrical and mechanical connection from the chassis base to the rack rails, and that the rack itself is tied to earth ground.

The unit must be grounded in accordance with all local/regional and national electrical codes.

6.5.1 Electrostatic Discharge

The enclosure is designed to dissipate all electrostatic discharges to the chassis base. Ensure that there is sufficient electrical and mechanical connection from the chassis base to the rack rails, and that the rack itself is tied to earth ground. It is recommend that suitable ESD precautions be observed during installation and service operations.
7 SCSI Enclosure Services

The following chapter describes the overall functionality of SES within the 4U60 Storage Enclosure.

7.1 SCSI Enclosure Services

The 4U60 Storage Enclosure provides enclosure management capabilities in-band through the MiniSAS HD ports using the SCSI Enclosure Services 3 (SES-3). The management functions are performed with SCSI commands, which are targeted at the Input/Output controller’s embedded SCSI Enclosure Processor (SEP) device. The 4U60 Storage Enclosure SES command set allows management clients to observe and control the functionality of the enclosure itself, as well as various management entities associated with the enclosure, including the embedded controller, disk drives, power supplies, fans, and connectors.
8 Enclosure Capacity

The following chapter describes defines the capacity of the enclosure and the qualified hard drives for the 4U60 Storage Enclosure.

8.1 Qualified Storage

The SEP examines the Inquiry data of all attached drives to determine if they are a supported type. If an unsupported device is attached to the 4U60 Storage Enclosure, it will not be available to access.

The enclosure uses the following qualified hard disk drives (HDDs):

Table 9: Qualified Hard Disk Drives

8.3 Partial Population

The 4U60 Storage Enclosure allows for partial population of the enclosure.

SSD Partial Population Rules

The following population rules for SSDs must be followed for a partially populated enclosure to function properly:

- The minimum amount of drives required for the enclosure to function properly is two SSDs.
- Each increase in drive must be done in increments of two.
- Each row that is partially populated with drives (HDD and/or SSD) must have the population of that row completed with blanks.
- A combination of HDDs and SSDs are allowed, but the rule of increasing capacity must be done by two when SSDs are involved.
- The remainder of the enclosure, preceding a populated row may remain empty.
- **When SSDs are involved, the population of drive slots must be done in the order and positions displayed below.**
- Repeat the configuration for each following row.
The following diagrams display the partially populated configurations for the first row of drives:

*Figure 2: Partially Populated Configurations*

---

8.3 Partial Population

8. Enclosure Capacity
The following population rules for **HDDs** must be followed for a partially populated enclosure to function properly:

- The minimum amount of drives required for the enclosure to function properly is **one** HDD.
- Each row that is partially populated with drives must have the population of that row completed with blanks.

**Note:** The position of the HDD does not matter as long as the remaining slots in that row have been populated with blanks.

- The remainder of the enclosure, preceding a populated row may remain empty.
- Repeat the configuration for each following row.

### 8.4 Drive On/Off Power Control

The 4U60 Storage Enclosure supports individual drive power control utilizing the T10 Pin 3 Power Disable. The following requirements must be met in order for the power control feature to function properly:

- HDD must support T10 Pin 3 Power Disable
- 4U60 Storage Enclosure drive board model number must be R0814-G0004-03 (old) and R0814-G0004-04 (new)
- Firmware Version: 4.2.5
9 Host and Enclosure Interconnect

The following section describes the interconnect from the hosts to an enclosure or enclosures.

9.1 4U60 Storage Enclosure Interconnect

The following rules for interconnecting or daisy chaining 4U60 Storage Enclosures must be followed for proper functionality:

- The maximum amount of 4U60 Storage Enclosures that can be connected together is four.
- The hosts must connect to the IN port on their respective sides.
The following figure displays the proper connection for interconnecting multiple enclosures:

*Figure 3: Daisy Chain*
10 Customer Replaceable Units

The following chapter describes the Customer Replaceable Units for the 4U60 Storage Enclosure.

**Note:** Refer to the Customer Replaceable Unit Guide for detailed instructions on how to replace customer replaceable units.

10.1 Power Supply Unit

The 4U60 Storage Enclosure contains two redundant power supply units (PSU).

**Note:** The PSU is a hot swappable component.

*Figure 4: Power Supply Unit*

10.2 Enclosure Storage Module

The 4U60 Storage Enclosure contains two Enclosure Storage Modules (ESM) as a standard for SAS drive configurations. The 4U60 Storage Enclosure contains one ESM for SATA drive configurations. The single ESM configuration replaces one of the ESMs with a blank to ensure proper airflow within the enclosure.
Note: The ESM is a hot swappable component.

Figure 5: Enclosure Storage Module

10.3 Hard Disk Drive

The full configuration of the 4U60 Storage Enclosure contains 60 qualified drives. If the enclosure is partially populated, any row that contains drives must be completed with drive slot blanks. Drive slot blanks look like a plastic version of a real drive and help keep proper airflow throughout the enclosure.
Note: The HDDs are hot swappable components.

Figure 6: Hard Disk Drive

For a list of qualified hard drives, see Qualified Storage on page 22.

10.3.1 Drive Carrier

The 4U60 Storage Enclosure contains 60 drive carriers.
Note: The drive carriers are hot swappable components.

**Figure 7: Drive Carrier**

10.3.2 Drive Blank

The 4U60 Storage Enclosure is designed to accept drive blanks to complete the population of drive rows and maintain proper airflow within the enclosure.
Note: The drive blanks are hot swappable components.

**Figure 8: Drive Blank**

10.4 **Cable Management Assembly**

The 4U60 Storage Enclosure contains a cable management assembly (CMA) that includes an upper and lower arm.
Note: The CMA is designed to cable the enclosure to meet the needs of your specific configuration.

Figure 9: Cable Management Assembly

10.5 Power Cords

The 4U60 Storage Enclosure contains a power cord for each of the two PSUs.

Note: It is highly recommended that you use the power cords that have been approved for this particular enclosure. For a list of approved power cords, see: Host Connectivity on page 19.

10.6 HD Mini-SAS Cables

The 4U60 Storage Enclosure contains an HD Mini-SAS cable for each of the two ESMs.

Note: It is highly recommended that you use the HD Mini-SAS cables that have been approved for this particular enclosure. For a list of approved HD Mini-SAS cables, see: Host Connectivity on page 19.

10.7 Expansion Cables

The 4U60 Storage Enclosure has the option to utilize expansion cables to allow for the connection of up to four enclosures.

Note: It is highly recommended that you use the Expansion cables that have been approved for this particular enclosure. For a list of approved expansion cables, see: Host Connectivity on page 19.
The **OUT** expansion port may be utilized for additional bandwidth in the event that the 4U60 Storage Enclosures are not being connected to each other.

### 10.8 Chassis

The 4U60 Storage Enclosure chassis houses all of the components that allow for the enclosure to function. During the chassis replacement, it is highly recommended that you remove and store the functioning components in a safe place.

*Figure 10: Chassis*

![Chassis Image]

### 10.9 Rail Kit

The 4U60 Storage Enclosure is installed into the rack using a rail kit. The rail kit is designed to clip into the rack before attaching it with screws. This allows for ease of installation and adjustment. The chassis and all other component will need to be removed in order to replace the component.

*Figure 11: Rail Kit*

![Rail Kit Image]
11 Operating the 4U60 Storage Enclosure

The following chapter describes the operation of the 4U60 Storage Enclosure.

11.1 Before You Begin

Ensure that you have all of proper cabling to connect to the enclosure. The enclosure is designed to be installed into a rack, not assembled on a bench top. Connect all of the cables, and turn on and boot the host or control node server. Connect the power to the 4U60 Storage Enclosure; it will come on and boot without any interaction from the user.

11.2 Power On/Off

The 4U60 Storage Enclosure does not have an external power switch, the enclosure is powered on by plugging power cords into the power supplies. Once powered on, the enclosure automatically powers up all drives.

11.3 Verifying the Drives

To verify the drives, do the following:

1. Using SG Utilities, type the following command `Sg_scan -a -s -v`.
   A list of device SCSI results appear.
2. Press Enter.
12 Component and Visual Indicator Identification

The following chapter describes the component and visual indicator identification.

12.1 Visual Indicator Identification

The 4U60 Storage Enclosure contains the following LEDs:

<table>

</table>

12.2 **SCSI Enclosure Services Page 02**

The SCSI Send Diagnostic and Receive Diagnostic Results commands can be addressed to a specific **SES element** in the enclosure. There are many different element codes, defined to cover a wide range of devices. Page 02h refers to the control and status of the enclosures PSUs, drives, ESMs, and sensors.

**Note:** Refer to the SCSI Enclosure Services documentation for more information on SES Page 02.
